

ROXY

Product Architecture & Navigation Design

A synthesis of Jo's vision and Nicole's architecture

Four-tab platform design — navigation logic — Grow screen specification

Version 1.0 | 2025 | Confidential

01. Design Philosophy

Jo's original concept is feature-rich and emotionally intelligent. What it lacked was a spine — a user journey architecture that tells a story about how someone moves through the platform and why. Nicole's navigation framework provides exactly that.

The merged design is guided by three core principles:

- **Progressive disclosure over density. Show the most relevant single thing first. Let users pull more depth when they want it — never push everything at once.**
- **Roxy as narrator, not feature. Roxy is not a chatbot in a box. She is the intelligence behind what each screen shows, in what order, and why.**
- **Every stage of queer life is served. A user who finds a partner does not leave. A user who is not ready to date still has three other tabs worth staying for.**

KEY INSIGHT **Dating is not a tab.** It is a mode — activated by the user's stated status — that surfaces contextually across Discover and Connect. This mirrors how WLW actually find partners: through community first, not a dating marketplace.

02. The Navigation Arc

The four-tab structure is not arbitrary organisation. It is a philosophical arc that mirrors how WLW relationships and identity actually develop:

Tab	Name	What it represents
1	Grow	Know yourself. Your progress, your communities, your people, Roxy as guide. Inward focus.
2	Discover	Find your people. The community feed, live events, games, and activities. Outward exploration.
3	Connect	Deepen bonds. Direct conversations, Roxy-assisted chats, speed dating, Sister Button. Relational depth.
4	Build	Create impact. WLW businesses, impact projects, brand partners, community organising. Purpose and legacy.

Read left to right, this is the investor story: a platform with zero churn scenarios, because every stage of a WLW's life — from questioning to partnered to community organiser — has a home here.

INVESTOR NOTE Zero churn architecture. Most apps are built around one use case and users churn when it is fulfilled or fails. Roxy's four-tab design means a user who finds a partner moves from Connect to Build. There is no life stage where Roxy stops being relevant.

Tab Overview at a Glance

GROW	DISCOVER	CONNECT	BUILD
Self · Roxy · Progress	Community · Games · Events	Chats · Dating · Support	Business · Impact · Projects

03. Tab-by-Tab Specification

Tab 1 — GROW

Purpose

The user's home base. Not a dashboard of equal-weight widgets — an intelligent, narrated surface where Roxy decides what matters today and surfaces it first. The guiding rule: one thing above the fold that earns a tap. Everything else earns its own screen.

The Density Problem & the Fix

Jo's original Grow concept contained: gamified statuses, badges, community groups, event previews, online friends, and Roxy AI — all competing on one screen. For Roxy's core demographic — shy, anxious, first-time queer app users — a dense home screen reads as overwhelming, not welcoming. The fix is progressive disclosure.

DESIGN PRINCIPLE **Progressive disclosure.** Show less. Make what is shown feel alive and personal. The user's brain should not have to prioritise — Roxy does that work for them.

Screen Layout — Five Zones

The Grow screen is structured as five vertical zones:

Zone 1 — Roxy's Daily Greeting Card [ABOVE THE FOLD — full width]

One contextual, personalised Roxy message referencing something real today: a live event, a friend online, a badge almost earned, a game in progress. Changes daily. The only element visible without scrolling. Tappable — links directly to the referenced item.

Zone 2 — Your Communities [collapsed → single most-active card]

Shows the one most active community right now with a live indicator (green dot if event in progress). Tap chevron to expand full list. Empty state: Roxy recommends 3 communities based on onboarding preferences.

Zone 3 — Your People [collapsed → one friend online now]

Shows one friend currently online and their status (e.g. 'In a community game'). Tap chevron to expand full friends list. Empty state: Roxy prompts the first connection action.

Zone 4 — Your Progress [collapsed → one badge in motion]

Shows one active badge with a visual completion bar and next milestone label. Tap chevron for full gamified profile: all badges, level, earned titles, ghost rate. Empty state: shows the first badge to earn.

Zone 5 — Roxy Chat Bar [persistent bottom — always visible]

'Ask Roxy anything.' For new users: onboarding conversation lives here. For established users: direct access wingwoman, community guide, Sister Button entry. Roxy never nags — she only responds when spoken to.

Zone 1 — Roxy's Daily Greeting Card

The only element visible without scrolling. It must earn its real estate every single day.

- **One contextual, personalised Roxy message — never generic**
- **References something verifiably real today: a friend online, a live event, a badge one action away, a game running in a joined community**
- **Changes daily — gives users a reason to open the app even with no notifications**
- **Tappable — the card links directly to whatever Roxy references**

Card Type	Example Roxy Message
Community nudge	'Sara from Lesbians of London just RSVP'd to Friday's book club. You both loved the same writing prompt last week.'
Badge nudge	'You're 2 connections away from your Community Builder badge. One introduction could do it.'
Live event	'There's a live game happening in Queer Gamers right now — 14 people in and it's chaotic.'
Friend online	'Alex just came online. She hasn't heard your hiking story yet.'
New user (empty state)	'Hey, I'm Roxy. You haven't joined a community yet — but I already know three that would love you. Want to see?'

Zone 2 — Your Communities (Collapsed)

- Default: single card showing the most active community right now
- Card shows: community name, live indicator (green dot if event in progress), last activity snippet
- Tap chevron to expand full list of joined communities
- Empty state: Roxy recommends 3 communities based on onboarding preferences with a single 'Explore' CTA

Zone 3 — Your People (Collapsed)

- Default: one friend currently online with their status (e.g. 'In a community game', 'Available to chat')
- Tap chevron to expand full friends list
- Empty state: Roxy prompts the first connection action ('Play a community game to meet someone')
- Friends made through Connect, community events, and speed dating all surface here

Zone 4 — Your Progress (Collapsed)

- Default: one active badge with a visual completion bar and next milestone label
- Tap chevron for full gamified profile: all badges, current level, earned titles, ghost rate score
- Gamified statuses and badges sourced from Jo's original design — adapted into this collapsed model
- Empty state: shows the first badge to earn with a clear single action to start

Zone 5 — Roxy Chat Bar (Persistent)

- Pinned to the bottom of Grow — always visible regardless of scroll position
- Placeholder: 'Ask Roxy anything'
- New users: onboarding conversation lives here. Roxy guides them through first actions step by step
- Established users: direct access to Roxy as wingwoman, community guide, and Sister Button entry point
- Roxy never nags from this bar — she only responds when spoken to

CRITICAL RULE Collapsed state shows the most interesting item, not a count.

'Lesbians of London — Live event now' is infinitely more compelling than '3 communities.'
Every collapsed card must earn the tap with the best item in that category.

Tab 2 — DISCOVER

Purpose

The community feed. Where Roxy's world comes alive — scrollable, social, and TikTok-feeling. Users explore what communities are doing right now, find events, and play games. All of Jo's community and gamification features live here.

Two Surfaces Within Discover

Feature	Description
Community Feed	Scrollable FYP-style feed of what communities are doing right now. Public communities are open to all. Private communities show a preview with 'Request to Join'. Live events surface at the top with a green indicator.

Games & Challenges	Dedicated section — accessible via top filter within Discover — for all of Jo's community games: Emoji Decode, Caption This, GIF Battle, Fill the Story, Five-Second Flex, Would You Rather, Chaos Scale, Shared Playlist Builder, Russian Roulette Match, and more.
--------------------	--

What Lives in Discover

- All community types: movie nights, book clubs, game nights, talks, meetups, city-specific groups, niche communities
- Public, private, and invite-only community tiers
- Live event indicators — surfaced prominently when something is happening right now
- Roxy-curated weekly challenges visible to all users
- Speed dating event listings and community-hosted speed date sessions
- New to the City mode — auto-surfaces local events for users who have moved or are traveling
- Filter controls: event type, location, vibe, interests, proximity

DESIGN NOTE **Two modes, one tab.** A Live Feed (what's happening now) and an Explore Mode (browse communities and upcoming events) — both accessible via a top segmented control. No separate tab needed.

Tab 3 — CONNECT

Purpose

The relational layer. This is where matched conversations live, where Roxy operates as active wingwoman inside chats, where speed dating sessions happen, and where the Sister Button lives. Dating is a mode that activates here when a user's status is 'Single & Looking' — not a separate destination.

Feature	Description
Active Chats	All ongoing 1-to-1 conversations. Roxy wingwoman features active inside each: icebreakers, nudges, whispered suggestions, ghost prevention, exit handling.
Speed Dating	Entry point to live and scheduled speed dating sessions (group rounds and 1-on-1). Roxy manages all timers, transitions, and post-session routing.
Matched Connections	Users matched through games, quizzes, or speed dating. Roxy opens the first message if neither user initiates within the time window.

Sister Button	Persistent icon in Connect. Opens peer support flow, professional resources directory, or crisis pathways depending on stated need.
Dating Mode	Activates when user status is 'Single & Looking'. Surfaces romantic matching signals in feed and adjusts Roxy's conversation style accordingly.
Friendship Mode	Platonic connection mode with prompts and games designed for making friends. Same tab, different intent signal. Ideal for those new to a city or not seeking romance.

WHY CONNECT, NOT A DATING TAB Dating emerges from connection, not from swiping. Embedding dating as a mode within Connect means romantic interest builds naturally through conversation depth — which is exactly how WLW form relationships. A separate swipe screen would contradict the platform's entire philosophy.

Tab 4 — BUILD

Purpose

Nicole's original addition and the most strategically differentiated tab on the platform. No existing dating or community app offers this. Build is where WLW bring their ambitions: businesses, causes, projects, and ideas. It positions Roxy as infrastructure for queer economic and creative empowerment, not just connection.

Why 'Build' not 'Promote'

'Promote' implies marketing — transactional and outward-facing. 'Build' implies creation, investment, and purpose. The functionality is identical; the framing is entirely different, and it is emotionally aligned with Roxy's brand: we are not here to sell to each other, we are here to build something together.

Feature	Description
WLW Business Directory	Promote and discover queer women-owned businesses. Searchable by category, location, and WLW-focus area.
Impact Projects	Browse and join queer impact-focused projects seeking collaborators, volunteers, or co-founders.
Brand Partnerships	Roxy's brand partners (Subaru, U-Haul, Airbnb, etc.) have an authenticated, non-intrusive presence here. Sponsorships feel like community participation, not advertising.
Community Organiser Tools	Event creation, multi-host management, ticketing, fundraising, and recurring event management for community leaders.

Verified Organiser Badges	Trust layer for nonprofits, recurring hosts, and queer organisations operating through the platform.
Pitch a Project	Any user can pitch a WLW project idea. Community engagement surfaces the best ones. Potential partnership and sponsorship pathway.

MONETISATION NOTE Build is Roxy's highest-revenue potential tab. Business listings, promoted projects, brand partner placements, ticketing infrastructure fees, and community fundraising processing all flow here. None of it feels like advertising because it is embedded in the community's own activity.

04. Jo's Features — Navigation Map

Every feature from Jo's original concept has a defined home in the four-tab architecture. Nothing is lost — everything is reorganised for clarity and user journey logic.

Jo's Feature	Tab / Location in Architecture
Roxy AI Wingwoman	Grow (Greeting Card + Chat Bar) + Connect (inside all active chats)
Emotional AI matching engine	Background system — surfaces through Discover feed curation and Connect matching
Gamified matching (quick games)	Discover → Games & Challenges section
Daily & weekly quizzes	Discover → Games & Challenges section (feeds matching algorithm)
Community feed challenges	Discover → Community Feed (Roxy-curated weekly prompts)
Speed dating sessions	Connect → Speed Dating entry point
1-on-1 matched chats	Connect → Active Chats
Ghosting prevention system	Connect → active inside all chats (Roxy-managed)
Ghost Rate score	Grow → Your Progress (full profile) + Connect (visible on matched profiles)
Gay Panic Button	Connect → inside active chats (Roxy icebreaker reset)
Invisible Wingwoman Mode	Connect → inside active chats (whispered suggestions above chat box)
Community groups & events	Discover → Community Feed + Grow → Your Communities (collapsed card)
Virtual & IRL events	Discover → Community Feed and Events section
New to the City Mode	Discover → surfaced automatically based on location signal
Verified Organiser badges	Build → community tools layer
Ticketing & donations	Build → community organiser tools
Sister Button	Connect → persistent icon; also accessible from Grow Chat Bar
Professional therapy directory	Connect → Sister Button flow
Crisis pathways	Connect → Sister Button flow
Profile status labels	Visible across Grow + Connect + Discover as context-appropriate tags
Follower count hidden	Platform-wide setting — never displayed to other users
Busy Mode toggle	Grow → Your People cards + own profile status

Brand partnerships	Build → partner presence + Discover → Community Feed sponsored events
TikTok-style FYP feed	Discover → Community Feed (primary surface)
Polite Fade-Out / Ghost exits	Connect → inside active chats and after speed dating sessions
WLW Business visibility	Build → Business Directory (Nicole's addition)
Impact projects	Build → Impact Projects (Nicole's addition)

05. Core User Journeys

These are the primary paths a user takes through the platform. Each journey demonstrates how the tabs work together rather than in isolation.

Journey 1 — New User, First Week

Day	Experience
Day 1	Onboarding quiz → status set → Roxy Chat Bar greets in Grow → recommends 3 communities to join
Day 2	Joins first community in Discover → sees live Community Feed → participates in a Roxy weekly challenge
Day 3	Plays first community game in Discover → matches with another player → Roxy opens a chat in Connect
Day 4	Grow card nudges: matched friend is online → taps into Connect chat → Roxy suggests a voice note challenge
Day 5-7	First badge earned (Grow progress card) → speed dating event via Discover → mutual thumbs up → Roxy opens second Connect chat

Journey 2 — User Who Finds a Partner

- Romantic connection deepens in Connect — status updated to 'In a Relationship'
- Dating Mode deactivates — Connect shifts to friendship and community focus
- Grow still shows community activity and friend updates
- Discover still surfaces events and games to attend together
- Build becomes the new engagement layer — she starts or joins a queer business project
- User never churns — platform simply evolves with her life stage

Journey 3 — User Who Needs Support

- Difficult moment → opens Connect → taps Sister Button
- Briefly describes situation → algorithm routes to an available peer supporter with matching topic expertise
- If no peer available → Roxy holds the space (clearly flagged as non-professional)
- Roxy surfaces professional therapy directory from the Sister Button flow
- After recovery → Grow card acknowledges return, recommends a low-pressure community event in Discover

06. Design Principles Summary

Principle	What it means in practice
Progressive disclosure	Show one compelling thing above the fold. Let users pull depth on demand. Never push everything at once.
Roxy as narrator, not feature	Roxy is the intelligence behind what each screen shows. Not a chatbot in a box — the platform's voice and decision-maker.
Dating as mode, not tab	Romantic matching activates contextually from user status. It lives in Connect and Discover, not a separate swipe screen.
Zero churn architecture	Every life stage of a WLW has a home. No use case completion equals no churn reason.
Safety as foundation	Screenshot blocking, location privacy, cis-het filtering, emotional incongruence detection, and ghost rate accountability are defaults, not settings.
Community first, romance second	Users arrive through Discover, bond through community, and find romantic connection naturally within that context.
Build as economic empowerment	The Build tab elevates Roxy beyond social app into infrastructure for queer economic and creative life — the long-term brand differentiator.
Empty states as invitations	Every empty state is a Roxy conversation, not a blank screen. The platform is never cold to a new user.
Collapsed defaults show best item	Every collapsed zone must show the most interesting item in that category, not a count or generic label.

Jo built the heart of Roxy.
Nicole built the spine.

Together: the first WLW platform designed for every chapter of queer life.
