

ROXY

by Thinqer

Platform Master Reference Document

The first WLW platform built from the ground up —
for connection, community, and real lasting bonds.

Confidential — Not for Distribution

Version 1.0 | 2025

01. The Vision

Roxy isn't just an app — she's a character, a movement, and a platform rebuilt from first principles for women who love women (WLW). She is the lesbian big sister who helps break the ice, keeps conversations alive, and shows up when you need her most.

Swipe culture was never built for us. Dating apps have long treated queer women as an afterthought — retrofitting heteronormative mechanics with a rainbow sticker. Roxy tears that down and rebuilds from the ground up, engineered around how WLW actually communicate: emotionally, intuitively, with depth.

 **The name:** Short, sweet, universally pronounceable in any language — much like Amazon's Alexa. Roxy is the AI wingwoman, the platform's personality, and the brand in one.

The Market Opportunity

142M+ WLW worldwide	87% Given up on existing apps	70% Hold university degrees	20x More likely to volunteer
-------------------------------	---	---------------------------------------	--

WLW represent one of the most loyal, culture-shaping, and underserved communities in the world. They are highly educated, deeply empathetic, and natural innovators — yet every existing dating and community platform has failed them. Roxy is the first platform designed to serve this audience on their own terms.

The Problem Roxy Solves

- **Women are socially conditioned to wait and be courted, making the first move terrifying. Most WLW matches never initiate conversation, and most matched chats die in silence.**
- **Swipe-based apps reduce people to a catalogue of faces, producing anxiety, frustration, and feelings of being unseen — not connection.**
- **Ghosting, shyness, and pressure-heavy small talk kill genuine connections before they can form.**
- **Safety gaps: catfishing, cis-het men infiltrating WLW spaces, and zero tools to verify authenticity are rampant on existing apps.**
- **Community is just as important as romance for WLW — and no platform serves both.**

Why TikTok Accidentally Proved Roxy's Thesis

TikTok has become the most effective WLW dating and community tool on the internet — not because it was designed for it, but because its algorithm surfaces shared humor, personality, and values before appearances. Comment threads became micro-dates. Content discovery replaced swiping.

But TikTok is missing everything Roxy provides: safety, intentional matching, ghosting prevention, direct connection pathways, and a structured bridge from 'we vibed on a meme' to an actual date. Roxy takes TikTok's proof of concept and builds the platform it should have been.

02. Roxy — The AI Wingwoman

Roxy is the emotional intelligence engine at the heart of the platform. She isn't a chatbot bolted onto a swipe app — she is the platform's core differentiator and personality. Think of her as empathy, engineered.

What Roxy Does

Feature	Description
Starts conversations	If two matched users don't initiate within a couple of minutes, Roxy steps in with a personalised, low-pressure icebreaker referencing both profiles and any game/quiz they just played together.
Prevents ghosting	Roxy monitors chat activity and re-engages dying conversations with creative prompts, challenges, voice note requests, and meme games — without pressure.
Wingwoman mode	Roxy can whisper suggested message options above the chat box ('Invisible Wingwoman Mode') so the user sends the message themselves, keeping authenticity intact.
AI Memory	Roxy remembers details from past chats and games and proactively surfaces them later (e.g. 'She mentioned her dog Bella last week — ask how Bella's doing!').
Escalates naturally	Roxy's objective is to lead matched users from text to a 3-minute video speed date. She does this gradually, organically, and only when signals indicate readiness.
Ghost Mode exits	If a user is unresponsive to 3 nudges, Roxy gracefully closes the chat ('Looks like this chat isn't vibing anymore — no stress, moving along.') so neither party is left in limbo.
Consent check-ins	Roxy periodically asks users if they want her to keep steering or if they want to take the wheel — keeping users empowered throughout.

Roxy's Emotional AI Engine

Roxy's matching and conversation intelligence is powered by a proprietary Emotional AI system that analyses signals most dating apps ignore entirely:

- Communication style and conversational depth
- Timing of replies and tone shifts
- Topic gravitation and curiosity markers
- Attachment cues detected through language patterns
- Humour tone and compatibility

- Behavioural signals from how users interact with others' posts and content
- Emotional incongruence detection — identifying manipulative or red-flag patterns early

 **IP Note:** The Emotional AI engine has standalone licensing potential beyond Roxy — applicable to other dating platforms, community apps, coaching tools, and even enterprise HR environments.

Roxy's Toggles & Controls

- Users can toggle Roxy on/off at any moment in any active chat
- Roxy's escalation style adapts based on how active and responsive both users are
- Users choose which AI behaviours they want active: icebreaker start, conversation nudges, exit handling, speed date escalation

Ghosting Prevention System

Roxy provides a full toolkit to reduce ghosting, one of the most painful experiences in digital dating:

Feature	Description
Polite Fade-Out Button	Sends a light, Roxy-phrased message on behalf of the user ('I think you're cool, but I'm not feeling a spark — wishing you all the pizza your heart desires.')
One-Tap Closure	Quick selectable responses phrased playfully by Roxy: 'Not feeling chemistry,' 'Taking a break from chats,' 'Good vibes, not the right match.'
Ghost Mode Accountability	After 3 unanswered nudges, Roxy closes the chat gracefully on behalf of both users with no drama.
Exit Through Humour	Roxy delivers a funny closing line at the user's request to end on a warm note.
Self-Remove Option	A user can quietly remove themselves from a match; the other person receives a gentle Roxy message — no blame, no explanation required.
Too Shy To Say Prompt	If a user hesitates, Roxy offers: 'Not sure what to say? Want me to handle the exit for you?'
Ghost Rate Score	Serial ghosters accumulate a visible Ghost Rate percentage on their profile, visible to users they match with (e.g. '85% likely to ghost'). Creates accountability without banning.

03. Matching & Compatibility

Roxy replaces the swipe entirely. Compatibility is built through behaviour, personality signals, and play — not through ranking faces.

How Matching Works

- **Users complete an onboarding quiz covering hard and soft compatibility rules (dealbreakers vs preferences)**
- **A continuous stream of quick games, daily quizzes, and interactive challenges feed data into the compatibility model**
- **Watch history, comment behaviour, and content interaction patterns supplement quiz data**
- **Roxy's algorithm improves with every interaction — creating compounding accuracy over time**
- **Matches can be filtered by location (local or worldwide) and other adjustable preferences**

Profile Design

Profiles are not static selfie galleries. They are living, interactive expressions of personality:

- Short video carousels, prompt responses, and content contributions replace photo-heavy profiles
- Key status info displayed upfront: Single & Looking, Friends Only, In a Relationship, Building Community, Busy, Open to DMs
- Follower counts are hidden from other users — visible only to the account owner. Eliminates intimidation and levels the playing field
- Busy Mode toggle signals when someone is unavailable — manages expectations and helps keep Ghost Rate down
- No vanity metrics, no popularity contests, no thirst trap algorithm rewards

Feed & Discovery

The home feed is a TikTok-style For You Page (FYP) curated by Roxy's algorithm, not chronology or popularity:

- Content-based discovery: memes, video prompts, challenge responses, and community posts surface based on compatibility signals
- Dating, friendship, and community content all coexist but are clearly tagged (Friend, Dating, Event)

- Users control their feed composition — choosing how much of each content type they see
- Watch history feeds back into matching, refining compatibility modelling over time

04. Gamified Matching

Roxy's secret weapon: matching that feels like play, not a job application. Every game and quiz is both entertainment and intelligence collection for the compatibility engine.

Quick Games (2+ Players)

Feature	Description
Emoji Decode	One user drops three emojis describing their day; the other translates. Reveals personality through interpretation.
Caption This	Both users caption the same meme or GIF. Matches are surfaced through shared humour. Community votes on winners.
Fill in the Story	Roxy starts a sentence ('Last night I accidentally...') and both users continue it, taking turns. Creates shared narrative moments.
GIF Battle	Users respond only in GIFs for 60 seconds to tell a mini-story.
Five-Second Flex	Each person has 5 seconds to brag about something ridiculous. Pure personality signal.
Shared Playlist Builder	Roxy suggests a music track; each user adds a song. By week's end, the match has a shared 'soundtrack.'
Russian Roulette Match	'Feeling Lucky' — instantly match with anyone online within your geo preference who has this mode toggled on.

2-Player Story Games

- Scenario-based prompts designed for matched pairs ('You're both stuck in IKEA — what do you buy first for your new apartment?')
- Role-play style compatibility checks disguised as fun. Surfaces lifestyle, values, and problem-solving style.

Daily & Weekly Quizzes

Feature	Description
Would You Rather	Funny but revealing ('Would you rather be stuck on a desert island with your ex or your ex's cat?'). Surfaces values and humour alignment.
Chaos Scale	'On a scale of 1-10, how much trouble would you get us into on a night out?' — quick personality read.
Secret Identity	Queer culture-coded personality quiz prompts.

Weekly Compatibility Quiz

Longer personality and values assessment that deepens algorithm accuracy every week.

Community Feed Challenges

Roxy sends optional community-wide creative challenges a few times per week. These reduce shyness, spark comments, and keep the app alive:

- Meme Drop: Post a favourite meme with a themed caption
- Show Your Sanctuary: Short video/photo of your cosiest home space
- Soundtrack Swap: Screenshot of your most-played song this week
- Flashback Friday: A childhood photo that proved you were probably gay before you knew it
- Emoji Recipe: Three emojis that describe your life right now — others decode them
- Pet Takeover: Your pet runs your dating profile for a day

 **Why it works:** Games create shared experiences before pressure, let personalities surface organically, collect compatibility signals invisibly, and keep the app feeling alive, dynamic, and worth returning to daily.

05. Speed Dating Sessions

Roxy flips the endless-texting model with structured, time-boxed video sessions that feel like a game — not a commitment.

How Speed Dating Works

- Daily scheduled sessions based on user timezone or geo preference
- Community sessions: group events (quizzes, live challenges, meme rounds) that break the ice before splitting into 1-to-1 mini video dates
- Algorithm rotates users through 3-5 minute timed sessions — Roxy manages transitions with no awkward exits required
- Themed daily prompts kick off every session (e.g. 'State your name and the last completely unnecessary thing you bought')

After Each Round: Feedback & Filtering

Feature	Description
👍 / 👎 Vote	Private micro-rating after each session. Neither user sees the other's vote until outcome is determined.
Mutual 👍	Both users are saved to each other's Favourites and Roxy opens a private chat between them.
One or both 👎	Nobody is added to Favourites. Clean, drama-free exit. No notification of rejection.
1-on-1 Extension	After a private speed date (not group round), mutual 👍 unlocks an optional 5-minute extension.
Reschedule Option	Pop-up calendar lets both users select a new time together directly in chat if they can't continue now.
Ghost Exit	Roxy can handle breaking it to the other user if the date didn't go well — using the Polite Fade-Out system.

Theme Nights & Add-Ons

- Bookworms & Coffee Lovers night, First-Date Disasters Only, Astrology Night, etc.
- Post-event Recap Feed: Roxy shares anonymous highlights to keep community energy buzzing after events
- On-screen soft icebreaker prompts during video sessions flashed by Roxy

 **Design principle:** Every speed date has a natural ending built in. No pressure, no ghost risk, no awkward goodbye. Time runs out and it's over — or they both choose to continue.

06. Community & Events

Dating is one lane. Community is the highway. For WLW, finding friends, chosen family, and belonging can be just as hard — or harder — than finding romance. Roxy builds the infrastructure for both.

Community Features

Feature	Description
Virtual & IRL Events	Built-in event discovery for movie nights, book clubs, city-specific groups (Lesbians of London), and hyper-niche communities (Queer Gamers, WLW Travelers).
User-Generated Communities	Any user can create, manage, and promote their own group or event. Recurring events can be managed under one page with multiple dates — reducing admin overhead.
Privacy Tiers	Public, private, or invite-only events and communities.
Remote Inclusion	Virtual communities ensure connection for users who can't travel, aren't out locally, or live in rural/isolated areas.
Personalized Feed	Filters by event type (social, creative, professional, support, dating), location, interests, and vibe.
New to the City Mode	Auto-suggests communities and events for users who've just moved or are traveling. Turns the app into a global queer map.
Verified Organizers	Badges for trusted groups, nonprofits, and recurring hosts add credibility and safety to community spaces.
Collaboration Tools	Multiple hosts can co-manage events seamlessly.
Ticketing & Donations	Optional paid entry or fundraising for community orgs built directly into the platform.
Event Highlights	Organizers upload photos/videos post-event, creating shared community memory. Fed to attendees' FYP.
Calendar Integration	Events sync to external calendars and can appear on Google Maps for local discovery.

 **The goal:** Build the largest WLW events and community hub in the world. From London Pride to a virtual karaoke night in a remote village — Roxy makes queer community accessible to everyone, everywhere.

07. Safety by Design

Safety is not a feature — it is the foundation. Every design decision defaults to protecting WLW spaces from the threats that have made other platforms hostile.

Core Safety Architecture

Feature	Description
Verified Users & Badges	User verification reduces catfishing and impersonation from day one.
No Screenshots	Screenshot blocking prevents content from being taken out of context or used maliciously.
No Filters / No Catfishing	AI-powered authenticity detection — emotional incongruence flags are raised early.
Cis-het Men Blocked	Platform-level controls prevent cis-het men from entering WLW spaces.
No Paywalls for Basic Functions	Safety and community access are not gated behind subscriptions.
Location Privacy	User location is protected — general area only, never precise coordinates.
Emotional Incongruence Detection	Roxy's AI identifies manipulative patterns, red flags, and behavioural inconsistencies in real time.
Ghost Rate Visibility	Serial ghosters carry a public accountability score that other users can see before engaging.
Anonymous Support Access	Users can access wellness support features anonymously with optional voice/video filters.

08. Wellness & The Sister Button

Dating apps stop at swiping. Roxy recognises that queer life includes complex emotional realities — breakups, loneliness, identity questioning, late-in-life lesbians, baby gays, and moments that need a real human voice.

The Sister Button is Roxy's built-in support system, blending peer connection with professional resources.

How the Sister Button Works

- **Press the button** → briefly describe the situation (limited characters) → algorithm sends to available peer supporters
- **Only users who have opted into the helper function** receive the push notification
- **During onboarding**, helper users select topics they're comfortable supporting: breakups, falling for a straight girl, gender dysphoria, questioning sexuality, and more
- **If nobody is available**, the user can chat with Roxy directly (with clear disclaimer that it is not professional therapy)
- **Helper function can be toggled on/off at any time**
- **Think: 'big sister on call'** — someone to chat with at any hour, from anywhere in the world

Professional Resources

- Directory of queer-friendly therapists and coaches, bookable through the app via integrated calendar
- Regional filters for users who prefer in-person sessions
- 24/7 crisis hotlines surfaced immediately for users in acute distress, localised by country
- Full anonymity available including voice and video filters for those not ready to be seen

♥ **Why this matters:** The Sister Button transforms Roxy from a dating app into a true lifeline — normalising vulnerability, building trust, and positioning the platform as the infrastructure for queer wellness and community care.

09. Multiple Paths to Connection

Not everyone joins Roxy for the same reason. The platform is designed for every stage of queer life, with no awkward misalignment about what users are looking for.

Feature	Description
Dating	Compatibility-driven matches powered by quiz signals, personality data, and content interaction. Tools: speed dates, video prompts, Roxy nudges.
Friendship	Dedicated platonic connection mode with prompts and games designed for making friends rather than romantic partners. Ideal for those new to a city, already partnered, or craving chosen family.
Community	Browse and join local/virtual events. Travel Mode surfaces events in new locations, turning Roxy into a global queer map.
Wellness & Support	The Sister Button, professional resources, and peer support for anyone navigating the emotional complexity of queer life.

Users control exactly what they want to see in their feed. Status labels are visible on all profiles upfront — eliminating the wasted energy of pursuing someone who is taken, not looking, or looking for something different.

10. Monetisation & Brand Partnerships

Roxy's monetisation model is community-first. Core safety features and basic community access will never be paywalled. Revenue is generated through premium features, brand partnerships, ticketing infrastructure, and professional service integrations.

Ideal Brand Partners

Feature	Description
Subaru	Famous for LGBTQ+ inclusive marketing since the 90s. Deep cultural equity with lesbian audiences. Potential sponsor of Sister Button therapy sessions.
U-Haul	'U-Hauling' is embedded in lesbian culture. Natural sponsor for speed dating, first-date contests, and peer-support rooms ('U-Haul Talks: Moving Through Life Together').
Absolut / Ben & Jerry's / Levi's	Queer-aligned lifestyle brands. Ideal for community nights, themed events, and identity story groups.
Airbnb / REI / Patagonia	Travel and adventure alignment. Queer travel safety guides, local event calendars, outdoor WLW meetup sponsorship.
MAC / Fenty / Billie / Aerie	Beauty and wellness brands with proven LGBTQ+ community investment.
Trevor Project / GLAAD	Nonprofit alignment adds credibility, safety signalling, and community trust.

Brand value prop: Roxy offers brands not just ad space — but authentic embeddedness in the heartbeat of queer culture. Early partners get first-mover advantage in the largest WLW ecosystem ever built.

11. Go-to-Market Strategy

Roxy doesn't launch into silence. The platform is being built with an audience-first approach, establishing community and brand credibility before a single line of production code ships.

Phase 1: Community Building (Pre-Launch)

- **Establish Roxy's voice on TikTok — the platform where the largest pool of WLW currently lives**
- **Content strategy: relatable queer dating humor, pain-point-driven content, WLW culture commentary, and repurposed viral WLW content (credited)**
- **No direct app promotion — build trust and community connection through shared values and experiences first**
- **Invite early community into a private Discord for beta testing, feedback, and co-creation ('You helped build this')**
- **Build an email waitlist to demonstrate investor-ready demand before launch**
- **Run a formal WLW survey to generate Voice of Customer data — already live at [thinqer.io](#)**

Phase 2: Survey & Validation

- Sprinkle survey promotion into content mix to drive responses
- Survey data becomes both product intelligence and investor evidence
- Community involvement creates ownership and emotional investment in the app's success

Phase 3: Original Content & Character Reveal

- Behind-the-scenes of building Roxy the platform and Roxy the character
- Develop Roxy as an AI-hosted social media personality to batch-create content at scale
- Tease features without fully revealing — build FOMO before launch day

Why This Approach Wins

Feature	Description
Lower CAC	Organic community-first growth means minimal paid acquisition cost at launch.
Warm Launch	Day one is into a community that already knows, trusts, and wants Roxy — not cold outreach.

Investor Appeal	Traction, community data, survey results, and waitlist numbers before a single user can log in.
Creator Fund Revenue	TikTok's Creator Fund can generate early income during development to support build costs.
Cultural Authority	By owning the WLW conversation online pre-launch, Roxy becomes the category before the category exists.

12. Technical Architecture Principles

Roxy is a production-grade platform, not a prototype. The following principles guide every technical decision from day one.

Core Technical Pillars

Feature	Description
Emotional AI Engine	The proprietary matching and conversation intelligence system. Processes communication style, timing patterns, tone shifts, topic gravitation, attachment cues, and humour compatibility. The platform's primary defensible IP.
Real-time Infrastructure	Live speed dating sessions, community events, and Sister Button peer connections require robust real-time capabilities (WebRTC for video, WebSockets for messaging).
Privacy by Design	Screenshot blocking, location obfuscation, anonymous mode, voice/video filters for identity protection. Safety is not layered on — it is foundational.
Scalable Matching Algorithm	Compatibility modelling must improve with scale. The system should become more accurate as the community grows — creating a compounding data moat.
Content Moderation	AI-powered detection of catfishing, emotional manipulation, and cis-het infiltration attempts. Community reporting workflows with verified organizer layers.
Identity Verification	Robust user verification to ensure WLW space integrity without creating friction that deters genuine users.
Cross-Platform	iOS and Android parity from day one. Progressive enhancement for web access.

 **Security principle:** Every feature defaults to the most privacy-preserving option. No data is shared, no location is exposed, and no screenshot is allowed unless explicitly and intentionally configured by the user.

13. The Bottom Line

TikTok proved the appetite is there.

Roxy makes it intentional, safe, and compatibility-driven.

The first lesbian dating and community platform designed around how queer women actually meet, connect, and thrive.

 Connect Dating, friendship, and chosen family — all in one platform.	 Belong Community, events, and safe spaces for every WLW, everywhere.	 Thrive Wellness, support, and tools for every chapter of queer life.
